Network Compliance and Control

Due to slow reaction time and lack of response accuracy to security breaches and non-compliant actions, businesses loose on average **USD 12 million** per year. The median time to discover compromised network is **205 days**. **90%** of large organizations had a security breach in 2015.

Imagine if you could:

- Link users and processes to network packets and flows.
- Monitor compliance in real time.
- Take action without delay.

Ultimate Network Intelligence & Control

Otangle Web Graph is a Network Security & Compliance Platform. It enables businesses to accurately and in real-time monitor users and user actions in their networks. It provides network processes compliance checking and enforcement. By recognizing non-compliant actions Otangle Web Graph automatically initiates a response, ranging from alerting the security team to targeted mitigation.

Features

Packet Based Access Control

User and process recognition. Packet by packet. At wire speed.

Compliance Checking

End-to-end compliance checking and enforcement. Process and user specific.

Automated Incident Resolution

Adaptive application of resolution policies based on incident analytics.

Advanced Asset Protection

Otangle Web Graph is able to mitigate advanced threats including network intrusions, Distributed Denial of Service (DDoS), Advanced Persistent Threats (APT) and insider threats.

Benefits

Accurate Network Intelligence

Real-time, precise knowledge about all users, user actions and processes in the network. It provides accurate answers to your questions with in a seconds.

Enhanced Control

Increased overall productivity due to efficient compliance enforcement.

Targeted Response

Precise and fast reaction to incident and/or non-compliant actions. Allows to mitigate attacks at the initial steps.

Proactive Security

Reduction of business disruption due to continuous and proactive compliance checking, security monitoring and automated incident resolution.
